

General catalogue

Solutions and products for gardening, irrigation, cleaning and outdoor life for hobby and professional use.

General catalogue

Fitt, a leading global group established in Italy in 1969 - and today a certified B corporation - is a pioneer in the production and development of solutions for the transfer of fluids for domestic, professional and industrial applications.

Ingenious for life

The mission of the FITT group is to improve the performance of its customers by providing pipes, hoses and systems for the transport of liquid, gaseous and solid substances, with products at the forefront of technology, design and sustainability.

Ongoing progress

FITT, currently led by Alessandro Mezzalana, was founded in 1969 by his father Rinaldo. With headquarters in Sandrigo, in the province of Vicenza, FITT – an international reference point in its industry – currently has 15 production sites (9 in Italy, 5 in Europe and 1 in the USA), 16 logistic sites worldwide and 6 subsidiaries.

Innovative and pioneering technology

FITT strongly believes in Open Innovation and works with an international network of partners, universities and research bodies, taking advantage of external organisations for the validation of its own quality tests and protocols, defining the impact of its products.

Multiplant production and logistics

Flexible logistics, automated and customised, capable of meeting the requests of the various sales channels served by our organisation: from large customers to the single individual purchasing on line. The network of logistics centers of FITT, strategically located throughout Europe, allows to deliver in 48/72 h in the main European markets.

FITT Solutions

FITT develops state of the art solutions for the handling of fluids, ensuring reliability, safety, performance and ease of use applicable to 9 dedicated and specialised business units.

THE RESPONSIBLE FLOW: FITT'S SUSTAINABILITY STRATEGY FOR 2030

The FITT journey

In FITT's vision, being a responsible company means transforming its business model to achieve an ideal balance, with the objective of **creating economic value and having a positive impact on the planet and on people's lives.**

FITT is a “**Società Benefit**”, and in addition to the object of making a profit, it has added in its statute the public and official commitment of a positive impact on society and the biosphere, operating in a sustainable and transparent manner.

Corporate responsibility

FITT is committed to producing state-of-the-art products, providing its customers with the best technologies in the field of fluid handling.

Investing in innovation, scientifically measuring the impact of its offering and adopting a supply chain approach that aims at minimising negative effects throughout the product life cycle, enables FITT to create an increasingly sustainable business model.

THE 7 OBJECTIVES SELECTED BY FITT

Environment:

FITT is engaged on two parallel fronts: the management of energy, water and waste, and the development of innovative products.

In the area of processes, the most important objective is **decarbonisation**, with the aim of setting **CO₂e reduction** targets (scopes 1-2-3), to be reached by the FITT GROUP by 2025. With this in mind, in 2023 FITT has started measuring its **Carbon Footprint** in accordance with the ISO 14064 GHG inventory. As far as sustainable development is concerned, the aim is to make sure that by 2025 10% of our turnover is from innovative products with lower impact, producing 10% less Co₂eq than their traditional equivalents.

Social:

FITT is engaged again on two complementary fronts, one internal and one external.

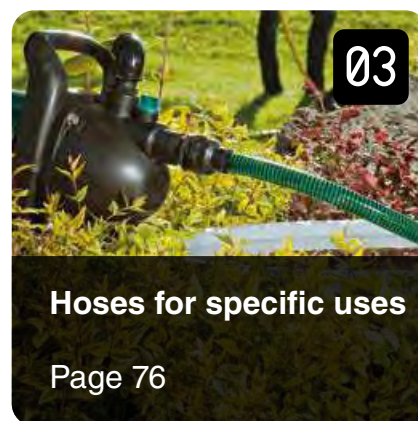

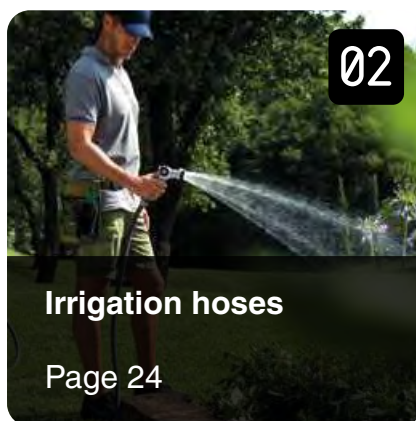

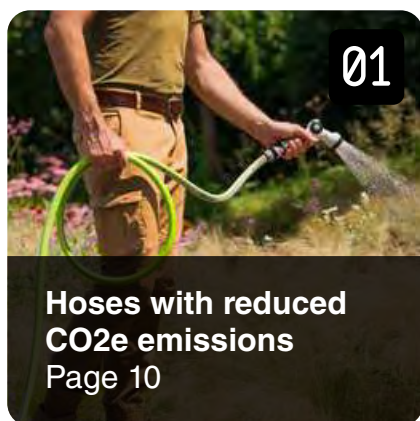

The first includes the **creation of wellbeing, inclusion and security for the FITT People**. The second concentrates on support of social and environmental initiatives, both local and international, mainly in the fields of health, women, youth and people with special needs, creating partnerships with the stakeholders.

Governance:

Act as a responsible company by rewriting a new business model that creates shared value, thus contributing to bring about a positive impact in the life of people and the environment.

hoses with reduced co2e emissions

These products are developed according to FITT's eco-design guidelines: performance, reduction and circularity. Ecodesign, or sustainable design, is an economic model that encompasses the entire process of a product's conception, design, marketing and disposal, with the aim of reducing the overall environmental impact of the entire chain.

HOSES WITH REDUCED CO2E EMISSIONS

innovation and sustainability

New product concepts resulting from the combination of FITT's sustainability strategy with the market trend.

FITT KIUMA AND FITT JANTIS: FITT'S INNOVATIONS FOR HOME IRRIGATION.

From the ecodesign guidelines, from the ability to scientifically measure the impact of products to reduce their CO₂e and from the adoption of a supply chain approach that minimises negative effects throughout the life cycle, FITT's new solutions are born, expressing quality, ease of use and sustainability objectives.

The two new domestic irrigation product families developed by FITT, which will be available on the market from 2025, follow two different but complementary paths: no PVC for FITT Kiuma and the use of phthalate-free recycled PVC for FITT Jantis.

The PVC-free hose.

It combines the benefits of extendable and traditional hoses in a single solution.

ECO-DESIGN FITTINGS

New fittings made from at least 60% recycled plastic

- 1 Tap connector
- 2x Quick fittings

TECHNOLOGIES

1. NTS PLUS mesh

The double NTS PLUS mesh, offers the hose in use

- Formidable malleability
- No twists
- No knots

2. TPE layers

The advanced formulation and thermoplastic elastomer make the hose

- 25% lighter than a pvc hose
- Highly flexible even under the most extreme conditions

FEATURES

LIGHT

FLEX

STRONG

FITT Kiuma is the new highly manoeuvrable hose that combines the benefits of an extendable and a traditional hose in one solution.

Ultralight, super flexible even at low temperatures (-20°C) and resistant to high pressures (up to 20 bar), FITT Kiuma is the high-flow hose for daily and intensive use.

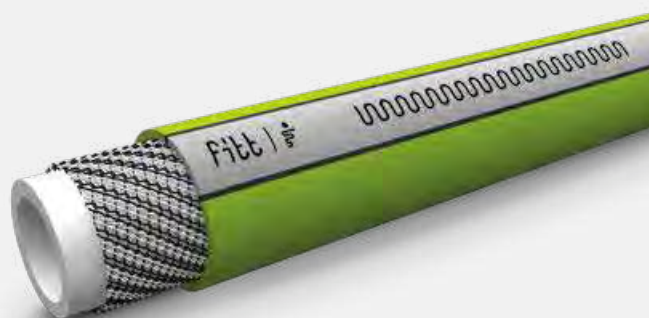

Completely PVC-free, FITT Kiuma is manufactured with an innovative patented formulation that uses compatible materials for both the layers and the NTS Plus textile reinforcement, making the hose fully recyclable at an industrial level.

WHY BUY IT?

- **LOW IMPACT PRODUCT** because it reduces its CO₂e emissions by 45%*
- **EASY TO USE** because it is much lighter than a traditional pvc hose
- **RESISTANT** and **DURABLE** over time
- **SINGLE-MATERIAL SOLUTION** innovative solution that enables complete industrial recycling
- **ORGANISATION** and **OPTIMISATION** of point-of-sale space

(*) Compared to the current FITT Ikon. Life Cycle Assessment according to EN ISO 14040 & EN ISO 14044.

point-of-sale materials

TOTEM

A self-assembly, lightweight and versatile cardboard tool to increase the visibility of the product with plenty of impact.

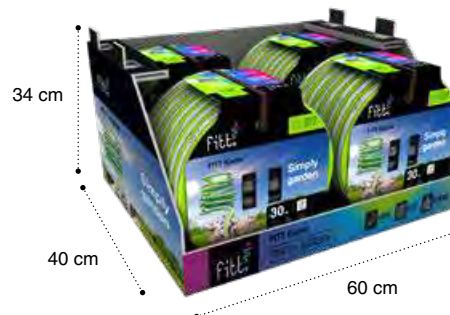

Dimensions: 57x156cm

DISPLAY

Robust cardboard tray with excellent stability performance. Designed to facilitate product handling while increasing visibility: ideal for optimising shelf display, but also a useful display tool for off-shelf promotions. The tray remains stable once stacked, and allows multiple lengths of hose to be mixed. The large opening allows easy access to the product.

Dimensions: 40x60x34cm

FLAG

A light and practical material that can be hung on the bottom of the shelf by means of a practical magnetic holder. It allows the main advantages of the product to be described.

Dimensions: L25xH60cm

STOPPER

A lightweight and versatile 'talking' cardboard technical tool. The stopper is ideal for drawing the consumer's attention to the shelf.

Dimensions:
Graphic area L13xH15cm
Fixing strip L8xH10.5cm

circularity: the innovative supply chain of 100% traced regenerated pvc.

Recycled material and the choice of a best partner.

THE RECYCLED MATERIAL CHOSEN BY FITT IS PHTHALATE-FREE.

It comes from the scrap of first-grade PVC articles produced by the same supplier, and allows for a 100% guarantee of product performance.

FITT selects its suppliers very carefully and for this special material has chosen not just a supplier but a partner.

FEATURES

60%
REGENERATED PVC

PHTHALATE FREE
FORMULA <0.1% weight/weight

100%
TECHNICAL PERFORMANCE
GUARANTEED

FITT Jantis uses 60% phthalate-free recycled PVC from a collaboration between FITT and a film and liner manufacturer. The recycled material consists of graded chips, selected to ensure consistent particle size and extrusion stability and, therefore, a high-performance hose.

The phthalate-free recycled PVC undergoes strict checks during all the various stages of the supply chain: from the time it leaves the warehouse of the supplier to the time it is extruded at the FITT's plants, through the milling and regranulation processes. The traceability of the supply chain allows control over the quality of the material and the production process in order to guarantee the product's properties.

WHY BUY IT?

- **LOW IMPACT PRODUCT** because it reduces its CO₂e emissions by 25%*
- **REDUCES THE USE OF PLASTIC MATERIAL** through circularity
- **UNALTERED PERFORMANCE CHARACTERISTICS** compared to other NTS
- **100% PLASTIC-FREE PACKAGING** with visible, theft-proof accessories

(*) Compared to the current FITT NTS. Life Cycle Assessment according to EN ISO 14040 & EN ISO 14044.

fitt jantis evo

FITT JANTIS EVO is a knitted hose with NTS technology that does not knot and kink, the original by FITT, the technology that has revolutionised the world of irrigation hoses. It is engineered according to circular economy principles to optimize resource reuse and minimize waste.

Structure: hose with 4-layer structure with a black inner layer made of phthalate-free and anti-algae recycled PVC, NTS textile reinforcement, black middle layer made of phthalate-free recycled PVC, lime-coloured phthalate-free PVC covering film with two anthracite stripes and white band.

a further step towards achieving the responsible flow 2030

FITT's commitment continues with the certification of the carbon footprint of its products.

INNOVATION

FITT extends the commitment stated in The Responsible Flow to other products by measuring their environmental impact.

This is done through the LCA (Life Cycle Assessment), an internationally recognised and certified analytical method (UNI EN ISO 14040, UNI EN ISO 14044 and UNI EN ISO 14067).

UNI EN ISO 14040 - UNI EN ISO 14044 - UNI EN ISO 14067

01. MEASURE

Life Cycle Assessment

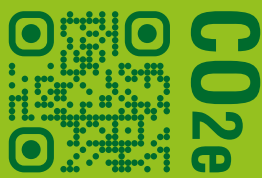

TRANSPARENCY

FITT chooses not only to measure the environmental impact of its products, but to communicate it transparently to the end user.

The journey begins with the FITT NTS range, with the ambitious goal of measuring the carbon footprint of 50% of its products by 2025 and 80% by 2030.

APPLICATIONS

FEATURES

Watering the garden or washing the car is easier, more practical and more enjoyable thanks to YOYO, FITT's innovative, **lightweight, compact and ready-to-use** watering system.

Consisting of an extendable hose, fittings and multi-jet spray gun, YOYO is the versatile product that revolutionised the garden hose market.

WHY BUY IT?

- **ULTRA LIGHT** compared to traditional pvc hoses
- Made with **PATENTED TECHNOLOGY** for greater strength and elasticity
- **REPAIRABLE** product for a longer life cycle
- **4 INTERNATIONAL PATENTS** guarantee higher quality levels

fitt yoyo go

FITT YOYO GO is the versatile irrigation solution.

Ideal not only to water the terrace, vegetable patch and garden, but also to clean the outside, the car and bicycles and to take with you on the boat and to the campsite. FITT YOYO extends when pressurised water passes through it by about twice its original length, to return to its original size after use. Thanks to its reusable case, FITT YOYO is now easy to store between uses and at the end of the season.

MULTI-JET SPRAY GUN

Versatile system for all irrigation and cleaning activities in working environments.
Developed in collaboration with **Centro Stile MOMODESIGN***, it stands out for its elegant and modern look.

ERGONOMIC HANDLE

With **SOFT TOUCH** rubber cover for an easy and safe grip even with wet hands.

ITALIAN DESIGN

Kit consisting of multi-jet spray gun, 2 quick connectors (1 aquastop) and 1"-3/4" tap connector.

FLOW MODULATOR

The adjustment lever, operated by the thumb, allows modulation of the water flow rate, for maximum efficiency and simplicity of use.

DIFFERENT SPRAY SETTINGS

Powerful and energetic, gentle, even and precise.

EASY-TO-REPLACE FITTINGS

Made of premium quality thermoplastic material with a soft rubber cover, for excellent grip even with wet hands.
Equipped with **fittings with Aquastop**, capable of blocking the flow of water when disconnecting the gun from the hose and tap.

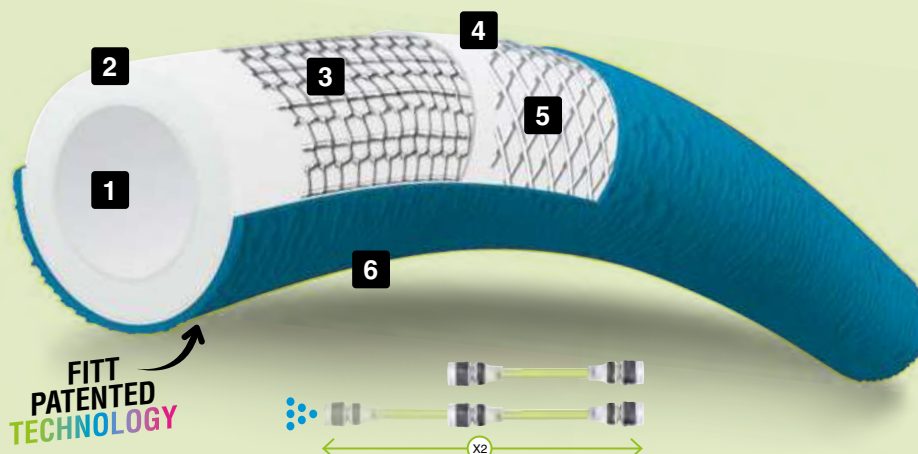

- **EASILY REPLACEABLE**
- **100% DRIP-PROOF**
- **INCLUDING TAP CONNECTOR**

|---|--|
| 1. Elastomer (TPE) inner layer with sliding compound to improve and promote water flow. | 2. Elastomer underlayer (TPE) which gives the hose the ability to extend and stretch in an elastic way. |
| 3. Polyester knit yarn layer (PET) which determines how far the hose can be stretched under the applied water pressure. | 4. Intermediate layer in elastomer (TPE). |
| 5. Polyester braided yarn layer (PET) that prevents radial expansion and promotes stretching. | 6. External coloured covering layer made of elastomer (TPE) resistant to ageing, which gives the hose its aesthetic appeal and resistance to wear. |

APPLICATIONS

FEATURES

FITT features an **innovative technology** that guarantees **high resistance** to various stresses, combined with **exceptional lightness**. Thanks to the highly innovative materials, the product is **extremely compact**, light and easy to handle. FITT Ikon is ideal for small spaces, such as small terraces, balconies, and thanks to the Aquastop system, which prevents water leaks, it can be conveniently used **inside the home**.

WHY BUY IT?

- **ULTRA LIGHT** compared to traditional pvc hoses
- Made with **PATENTED TECHNOLOGY** for greater strength and elasticity
- **REPAIRABLE** product for a longer life cycle
- **4 INTERNATIONAL PATENTS** guarantee higher quality levels

fitt ikon

FITT Ikon is the only extendable hose on the market, manufactured by a layered extrusion process using TPE (plastic elastomer) and exclusive nylon knitted reinforcement.

FITT Ikon is the perfect product to take care of flowers and plants on the balcony, but also to wash garden furniture, cars, bicycles, toys. It can also be extremely useful when going camping, to wash your boat, or even your pet.

MULTI-JET SPRAY GUN

Versatile system for all irrigation and cleaning activities in working environments.
Developed in collaboration with **Centro Stile MOMODESIGN***, it stands out for its elegant and modern look.

ERGONOMIC HANDLE

With **SOFT TOUCH** rubber cover for an easy and safe grip even with wet hands.

ITALIAN DESIGN

Kit consisting of multi-jet spray gun, 2 quick connectors (1 aquastop) and 1"-3/4" tap connector.

FLOW MODULATOR

The adjustment lever, operated by the thumb, allows modulation of the water flow rate, for maximum efficiency and simplicity of use.

DIFFERENT SPRAY SETTINGS

Powerful and energetic, gentle, even and precise.

The responsible garden hose.

Light, strong and compact.

-43%

CO2e EMISSIONS

Percentage of CO2 equivalent emissions of one metre of FITT Force hose compared with one metre of the current FITT NTS hose.

Life Cycle Assessment according to UNI EN ISO 14040 & UNI EN ISO 14044.

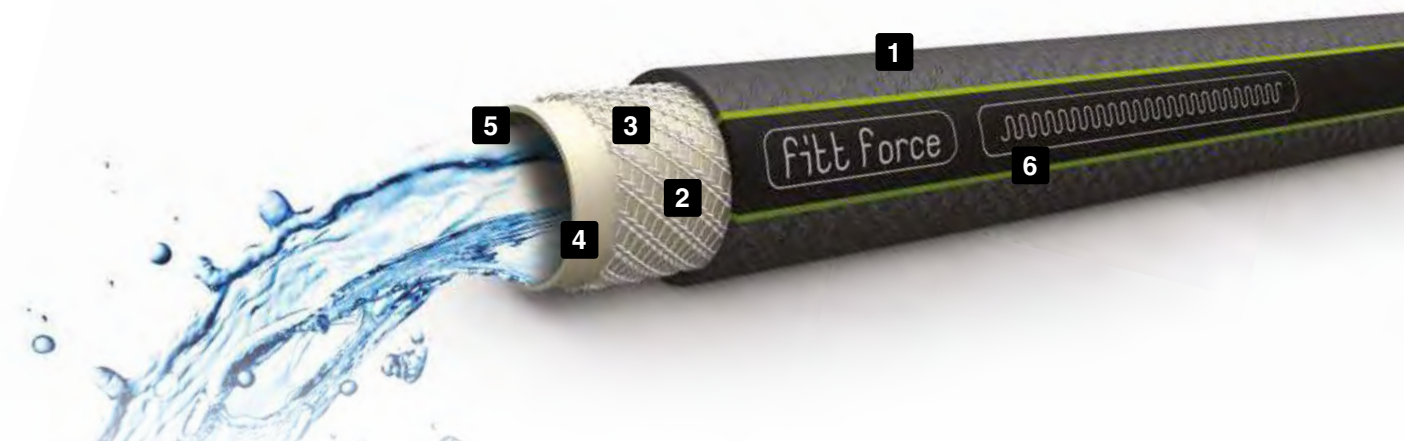

FITT Force was developed according to FITT's **eco-design** guidelines: **performance**, **circularity** and **reduction**.

FITT Force combines an **innovative technology** which guarantees high resistance to various stresses combined with exceptional lightness, with highly evolved materials: the product is **extremely compact** and therefore easy to use even in the **most extreme situations**. The hose is suitable for both **intensive use**, perfect for **large gardens** and **irrigation activities**, and for **daily domestic use**.

WHY BUY IT?

- **LOW IMPACT PRODUCT** because it reduces its CO2e emissions by 43%
- **2X LIGHTER** compared with a traditional pvc hose
- **3X MORE COMPACT** than a traditional pvc hose
- **RESISTANT e DURABLE** over time
- **ORGANISATION** and **OPTIMISATION** of point-of-sale space

TECHNOLOGIES

1. High tenacity technology (HDT) abrasion and puncture resistant outer layer.

2. The NTS mesh technology eliminates water flow restrictions due to knots and twists.

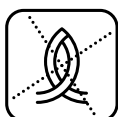

3. Reinforcement layer made of high tenacity fibres to withstand pressures up to 20 bar.

4. PVC, phthalates and lead free.

5. Ultra-soft under layer for extremely easy handling and high flexibility even at low temperatures (-40°C).

6. Perfect all year round: -40°C / +80°C.

FEATURES

NO KNOTS

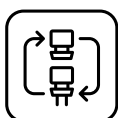

NO TWISTS

EXTREMELY FLEXIBLE AT LOW TEMPERATURES

EASY TO USE

COMPATIBLE WITH THE MOST COMMON FITTINGS

EASY TO STORE

ABRASION AND PUNCTURE RESISTANT

PHTHALATE FREE FORMULA <0.1%

BURSTING PRESSURE

WORKING PRESSURE

The hose is flat when stored but takes on its classic round shape during use. When the water flow stops, it returns to its original shape and size: the water drains away and the product becomes once again easier to handle, compact and easy to store.

MADE OF RECYCLED PLASTIC

During production we use > 30% recycled polypropylene from post-industrial recycled quality raw materials according to ISO 14021.

Complete with:

fitt Force

-43%

CO₂e EMISSIONS compared with the current FITT NTS

FITT Freel is FITT's solution designed to **offer to the public, in one single package**, a hose reel ready to be connected to the tap, and the innovative compact and lightweight FITT Force hose. The hose reel features a **dynamic mechanism** specifically designed for compact and lightweight hoses: **the original Dynamic Tech - Patent Pending - adapts to the volume of the hose**: when the hose fills with water it shrinks, and when the hose is empty it extends, avoiding kinks and flow restrictions. The product is suitable for both **intensive use**, and **for daily and domestic use**.

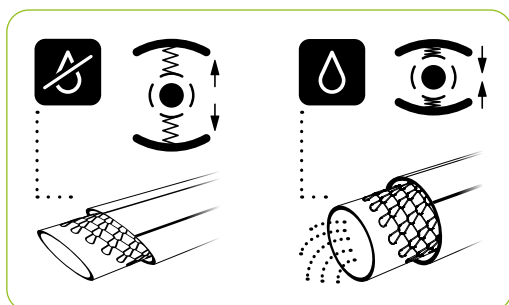

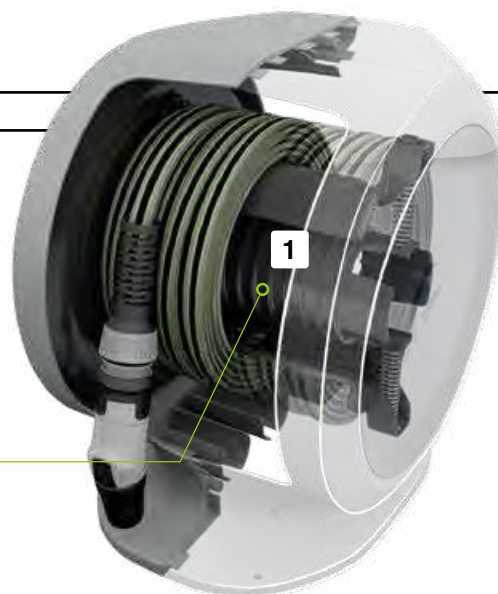

WHY BUY IT?

- **LOW IMPACT PRODUCT** because it uses **30% recycled plastic material**. Complete with FITT Force, which reduces its CO₂e emissions by 43%
- **SUPER LIGHT** compared to other hose reels that mount a classic pvc hose
- **VERY COMPACT** compared to other hose reels that mount a classic pvc hose
- Designed to make the most of the features of FITT Force

TECHNOLOGIES

1. Inside is an innovative dynamic mechanism that facilitates the expansion of the compact and lightweight FITT FORCE hose.

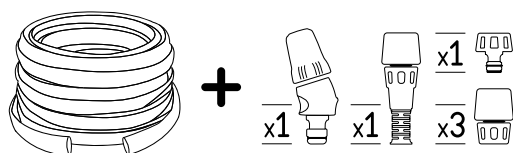

When the hose reel is not been used, the FITT Force hose is flat and fits perfectly inside. When the tap is opened, the hose fills with water and takes on its classic round shape: the **DYNAMIC TECH** mechanism guides the expansion of the hose. When the tap is closed again, the hose returns to flat and the mechanism returns to its initial position, making sure that FITT Force fits perfectly inside.

EU registered design 9059512 / Patent pending structure

FEATURES / EQUIPMENT

Full kit ready for use:

- 1 Fitt Force 20 m hose
- 4 Fittings
- 1 Nozzle
- 1 Tap connector

From the ultimate in innovation, the advanced fitting, gun and nozzle system for products with NTS Technology.

MULTI-JET SPRAY GUN

FITT READY is a versatile system for all watering and cleaning tasks in working environments. Thanks to its ergonomics, it is extremely accurate in professional use. Created in collaboration with **Centro Stile MOMODESIGN***, it stands out for its elegant and modern look.

ERGONOMIC HANDLE

With **SOFT TOUCH** rubber cover for an easy and safe grip even with wet hands.

ITALIAN DESIGN

Kit consisting of multi-jet spray gun, 2 quick connectors (1 aquastop) and 1"-3/4" tap connector.

FLOW MODULATOR

The adjustment lever, operated by the thumb, allows modulation of the water flow rate, for maximum efficiency and simplicity of use.

DIFFERENT SPRAY SETTINGS

Powerful and energetic, gentle, even and precise.

COMPACT ERGO NOZZLE: ALL-ITALIAN DESIGN

Stylish design developed in collaboration with **Centro Stile MOMODESIGN***, for a more refined look.

Its super compact and ergonomic shape is designed to adapt to the fittings, making it practical and easy to handle.

The continuous jet and high-water flow cone can be adjusted for any needs.

The soft rubber coating and non-slip texture offer maximum comfort even with wet hands.

(*) Design company
EU registered design number 8210983

EASY-TO-REPLACE FITTINGS

Made of premium quality thermoplastic material with a soft rubber cover, for excellent grip even with wet hands. Equipped with **Aquastop** fittings capable of blocking the flow of water when the gun is disconnected.

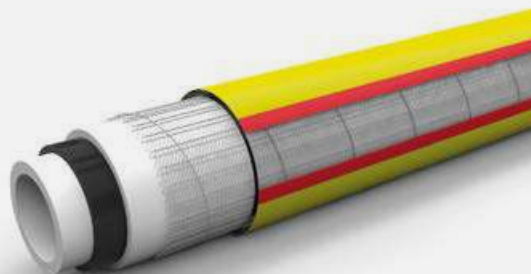

- **EASILY REPLACEABLE**
- **100% DRIP-PROOF**
- **3/4" TAP CONNECTOR INCLUDED**

Italian Design

Fitt Flora

6-layer PVC hose made with high quality raw materials and with high flexibility and malleability. The knitted reinforcement with high tenacity spiral allows its intensive use in gardening.

fitt polyfusion tech

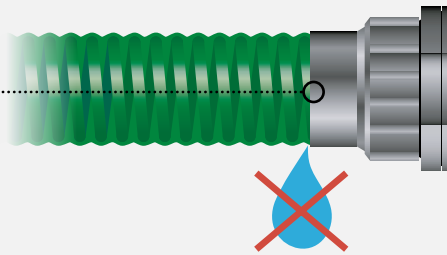

For a perfect seal.

Polyfusion is a joining process that guarantees an absolute hose-fitting seal for the connection to suction pumps, avoiding the risk of bursts, breakages and water leaks that can compromise the operation of such equipment.

TECHNOLOGY

- Absolute hose-fitting seal
- No glue
- No clamps

The polyfusion technique ensures surface continuity in the fitting area, avoiding the typical step that is created when manually assembling a common spiral hose to the fitting using glue and clamps.

100% airtight fittings

Suction from basins and containers

fitt aspirflex

Suction hose with 100% watertight connection system, equipped with pump connection kit with 1" and 1" 1/4 connections for suction from wells, cisterns and ponds of liquids and clear water.

Thanks to the polyfusion process between hose and fitting, any possibility of breakage or water leakage is eliminated.

Construction: green PVC spiral hose with plastic connections and suction filter, and plastic anti-backflow valve.

Temperature of use: -10°C/+50°C

fitt ecodrop

Porous soaker hose allows water droplets to gradually seep through its porous material, delivering moisture directly to plant roots where it's needed most.

Used under or above ground, it is suitable for localized irrigation of gardens and orchards (hedges, bushes, flower beds or lawns) allowing high water savings when compared with traditional irrigation systems.

Recommended operating pressure: min. 1 bar - max. 3 bar at 23°C.

Double performance and even more professional.

Thanks to the unique and original **NTS PLUS** double mesh, FITT NTS MASTER PLUS is a hose that offers even greater strength and performance, as well as great malleability, preventing knots and twists, and ensuring a constant water flow.

The **SKY TECH** technology increases resistance to cuts and abrasions and makes the hose extremely slippery and easy to handle, allowing it to slide on all surfaces, even around corners. Thanks to the SKY TECH specially formulated UV protection film, it prevents premature ageing of the hose.

DESIGNED IN ITALY
MADE IN EUROPE

TECHNOLOGIES

1. NTS PLUS mesh

The 3-layer double NTS PLUS mesh interior offers to the hose in use

- Malleability / easy to use
- No twists
- No knots
- Formidable resistance to pressure and expansion

2. SKY TECH external layer

The SKY TECH technology, a thin technopolymer layer, ensures

- Resistance to cuts and abrasions
- High slipperiness

fitt nts master plus

High performance hose suitable for very intensive professional use, grey-coloured which gives a captivating and distinctive look.

The double mesh guarantees extreme resistance to pressure and to the expansion caused by the water flow. Made with materials that give an excellent degree of flexibility at low temperatures.

Structure: hose with 6-layer structure with transparent outer cover with two anthracite stripes and grey band, SKY TECH film, textile reinforcement with NTS PLUS double mesh consisting of black and white yarn, grey support middle layer, black anti-algae layer, grey protective inner layer.

Visible, flexible and UV-resistant.

Highly visible hose, particularly suitable for use on construction sites and in the building industry; it offers great strength and good flexibility, even when used in cold temperatures.

Made with **NTS** mesh, unique and original, FITT NTS WORK is a hose that offers great malleability by preventing the formation of knots and twists, ensuring a constant flow of water. Thanks to its high visibility due to its bright orange colour, it is very suitable for use on building sites and in construction.

The **SKY TECH** technology increases resistance to cuts and abrasions and makes the hose extremely slippery and easy to handle, allowing it to glide over all surfaces, even in corners. Thanks to the SKY TECH specially formulated UV protection film, it prevents premature ageing of the hose.

fitt profy

Very robust 3-layer PVC hose, suitable for professional use. The high tenacity polyester braided reinforcement gives it a high resistance to pressure, and the robustness allows it a long service life.

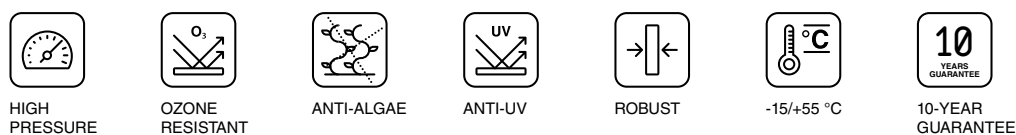

The specific resistance to degradation by ozone (a gas derived from oxygen but with a high oxidising power) gives FITT Profy specific oxidation resistance properties. Oxidation is the main chemical and physical mechanism responsible for the degradation of materials and products exposed to outdoor use and harsh applications.

Structure: UV-black opaque outer cover with two red stripes, braided textile reinforcement, black anti-algae inner layer.

Temperatures of use: -15°C/+55°C

FCM - Compliant with European Regulations 10/2011 and 2020/1245 for Simulants A.

pressure washer kit

Kit with hose and filter, ideal for connecting the high-pressure washer to the tap: suitable for all high-pressure washers.

Construction: 3-layer PVC hose with three fittings (tap connector, quick fitting and aquastop quick fitting); it includes particle filter to prevent water impurities from entering the washer, preventing damage to the machine and extending its service life.

fitt combo display

COMBO

Sales system for large-scale distribution: cut hose concept.

SHELF DISPLAY

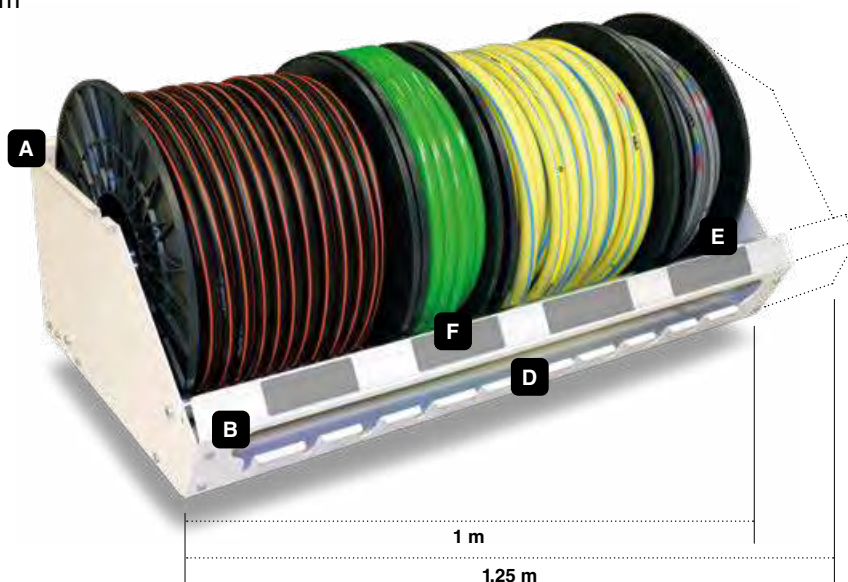

Offering hose cut to size is a versatile sales solution that allows consumers to **buy as much product as needed**. This is why FITT has developed COMBO Display, a practical and versatile system for **optimum product presentation** at the point of sale.

WHY CHOOSE THIS SYSTEM?

- 1  The COMBO system puts the **end consumer at the centre**: the customer buys exactly the **metres of hose needed** without **wasting product** and **without packaging to dispose of**.
- 2  **Durable construction and reusable flanges** minimise the disposal.
- 3 **Always tidy shelf** and ease of use.
- 4 Availability of **various types of flexible** and spiral hoses for **different areas of application**.
- 5 **Ease of assembly, set-up and replacement** of exhausted coils.

CHARACTERISTICS OF THE EXHIBITION MODULE

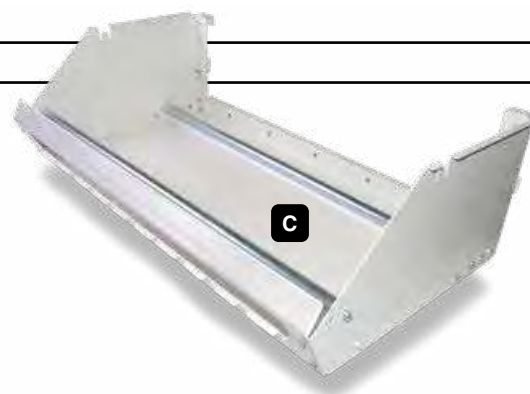

The shelf is optimized with 1m and 1.25m sales modules: the structure of the cradle and the way the coils are made, makes an easy task of unwinding and cutting the hose.

THE CRADLE

With COMBO Display, the coils are stored directly at the bottom of the cradle and the flanges help with unwinding.

The cradle is supplied disassembled in a box to optimise storage and transport: **assembly is facilitated by a detailed instruction manual.**

TECHNICAL SPECIFICATIONS

A 	Hooks for hanging the display on the wall.	D 	Guided hose exit for easy unwinding.
B 	Metre to facilitate measurement and cutting of the hose.	E 	Locking device to prevent unwinding of the hose.
C 	QR code that takes to the video showing the correct assembly and positioning of the cradle.	F 	Price tag area.

fitt smart combo display

SMART COMBO

Sales system for small and medium-sized shops.

COMPACT AND MOBILE DISPLAY

Offering hose cut to size is a versatile sales solution that allows consumers to buy as much product as needed.

FITT has developed SMART COMBO, a **compact and mobile display for small and medium-sized shops** offering hose cutting services.

The display is a stand-alone structure that **can be positioned in strategic positions** in shops, and is **ideal for cross-selling** other product categories.

WHY CHOOSE THIS SYSTEM?

- 1  The SMART COMBO system puts the **end consumer at the centre**: the customer buys exactly the **metres of hose they need with no product waste and no packaging to dispose of**.
- 2  **Durable construction and reusable flanges** minimise disposal.
- 3 **Compact structure** maximises sales in a small area.
- 4 **Mobile structure** for positioning in the shop in the most appropriate sales area.
- 5 A sales method that **guarantees order** within the **point of sale**.
- 6 **All in one**:
 - **easy assembly** and set-up;
 - **ease of replacement of** exhausted coils;
 - availability of various **types of flexible and spiral hoses for different areas of application**.

TECHNICAL SPECIFICATIONS

A		Positioning wheels with locking brake.	E		Adhesive strip with measuring tape, to help measuring and cutting the hose.
B		Guided hose exit for easy unwinding.	F		Easy coil loading and refilling.
C		Coil sliding bar for easy hose unwinding.	G		Distinctive and visually appealing communication that enhances the product range and the display area.
D		Price tag area.			

SHIPPING AND ASSEMBLY

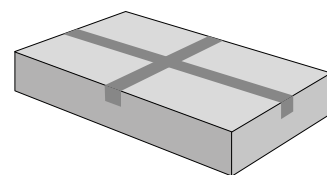

SMART COMBO is delivered **disassembled and contained in 2 boxes** to optimise storage and transport.

coil structure

- COMBO
- SMART COMBO

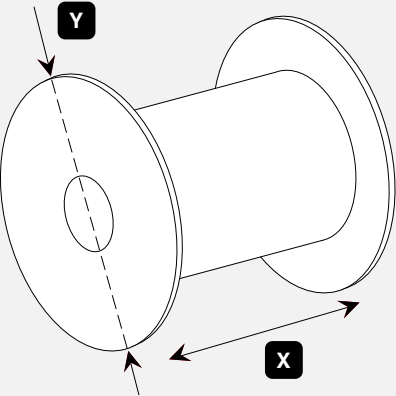

The flanges are not thrown away.

The reels consist of a cardboard inner mandrel onto which the hose is wound, and shockproof, non-deformable plastic flanges in RAL 7610 grey. When refilling with a new coil, the flanges can be detached from the cardboard core and reused several times, avoiding unnecessary material waste.

- A

Cardboard mandrel.
- B

Polystyrene flanges: material with high shock resistance and bending properties.

PROFESSIONAL WATER HOSES

fitt nts master plus

High-performance hose suitable for very intensive professional use.

The double mesh guarantees extreme resistance to pressure and to the expansion caused by the water flow. Made with materials that give an excellent degree of flexibility at low temperatures.

Structure: 6-layer hose with transparent outer cover with two anthracite stripes and a grey band, SKY TECH film, textile reinforcement with NTS PLUS double mesh consisting of black and white yarn, grey support middle layer, black anti-algae layer, grey protective inner layer.

Temperature of use: -20°C/+60°C

GARDENING AND IRRIGATION HOSES

fitt ecodrop

Black porous soaker hose that oozes water evenly and slowly, through a series of small holes.

Used under or above ground, it is suitable for localized irrigation of gardens and orchards (hedges, bushes, flower beds or lawns) allowing high water savings when compared with traditional irrigation systems.

Recommended operating pressure:

min. 1 bar - max. 3 bar at 23°C.

CERTIFIED DRINKING WATER HOSES

fitt pure

KTW-BWGL certified hose for use with drinking water and liquid foods.

Certified by the German laboratory Kiwa GmbH, FITT Pure meets the most stringent German and European regulations for drinking water and the food industry. Also suitable for installation in drink delivery taps at pubs, at fairs and events. Non-toxic and plasticizer-free patented hose, extremely flexible and resistant.

Structure: TPE hose with NTS Plus mesh.

Temperature range: -30°C/+70°C

HOSES FOR LIGHT TECHNICAL APPLICATIONS

fitt refittex fuel

Hose for industrial and agricultural use, suitable for the flow of hydrocarbons.

Made with a special oil-resistant formulation, FITT Refittex Fuel is ideal for the flow of non-aromatic hydrocarbons such as oils and petroleum, for industrial applications and the refuelling of agricultural equipment. High flexibility. Good UV ray resistance.

Structure: PVC hose with polymeric plasticiser and high tenacity polyester reinforcement.

Temperature range: -20°C/60°C

insurance certificate

FITT guarantees its products with a specific insurance cover for all damage that may be caused to third parties.

FITT products are covered by a specific policy with the following conditions:

- **MAXIMUM LIABILITY: EURO 15,000,000**
- **VALIDITY: WORLDWIDE**
- **VALIDITY OF THE COVER FROM THE DATE OF SALE**

The cover for damages also applies the following, insofar as they occur or are presumed to occur: repair, meaning the modification or rectification of the defective product and the installation of the product free of any defects; replacement, i.e. the removal of the defective product and the installation of a corresponding product free of defects.

FITT implements a business management policy aimed at ensuring the highest quality in terms of technology, products and services, in full respect of the environment in which it operates.

The certification of the quality system obtained by the company confirms its compliance with the requirements of the **UNI EN ISO 9001:2015** standard for the following categories:

1) Design, manufacture, storage and distribution of:

- Pipes, hoses and systems in plastic material, also suitable for food use, for Garden, Industrial and Building applications, obtained by extrusion and moulding.
- Extruded plastic film.
- Virgin and regenerated PVC granules, obtained through mixing and granulation.

2) Marketing of hoses and systems.

CERTIFIED PROCESSES

FITT implements an integrated management system focused on both product and process approval and control, acting on risk prevention and variability reduction.

On request, FITT can provide a new product approval plan based on the PPAP (Production Part Approval Process) method.
