

KIT MAGNETS FOR RECTANGULAR ADAPTERS

KIT MAGNETS FOR RECTANGULAR ADAPTERS

CARATTERISTICHE

Kit consisting of no. 2 galvanized 2-hole plates with "medium force" magnet glued (from factory) on each plate and by no. 4 4x9.5 trilobed screws. The plates are to be fixed on VMAD series adapters. The kit is necessary in case a VMGSF series perforated grid is installed on the ceiling/ceiling to secure it from the possibility of its falling. It can be installed before the laying of the

adapter or even afterwards, e.g. at the time of laying the grid n painted sheet metal. The hole spacings of the plates correspond to the hole spacings already prepared on the adapter; that is, on its extension in case the adapter is installed with extension.
