

Radio chronothermostat

RADIO CHRONOTHERMOSTAT

FEATURES

"Wireless" chronothermostat: sends operation commands via radio frequency; the signal sent can be received by the REGOLO/REGOLO PLUS control unit, which has the task of recognizing and interpreting it, translating it into an operation to be performed (example: operation and/or display). It has a large, clear display (with adjustable contrast) to keep track of all its functions in real time.

Ease of programming is the key feature. In its permanent memory are 3 different freely programmable programs designed to provide maximum comfort.

Main features of the CR chronothermostat:

- Program or manual operation
- Changing the year, month, day, hour and minute.
- Display of current time or room temperature.
- Possibility of correction of the detected room temperature (OFFSET).
- Possibility of total exclusion of absence temperature.
- Ability to enter access password for changing settings.
- Possibility of assignment to one or more receivers.
- Display indication of radio signal transmission.
- Total shutdown of thermoregulation.
- Easy matching of transmitter to zone, with self-learning.
- Signal transmission of " " for verification of signal presence and range.
- Transmission to the receiver of the status of near-discharged batteries.
